

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + Keep it legal Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at http://books.google.com/

Industrial Arts Index

Published February, April, June, October, December by THE H. W. WILSON COMPANY

White Plains, N. Y...... 39 Mamaroneck ave.

Full information in regard to subscription price will be supplied on request.

With this issue the Industrial Arts Index completes its first volume. The removal of the publishers from Minneapolis to White Plains prevented the publication of a number in December. The present issue however, is a complete index for 1913 of the magazines listed on the following page. Numbers one and two of volume two will be published as a double number in April and the publishers hope to resume thereafter the regular schedule.

The four numbers thus far published have been in the nature of an experiment. The list of periodicals is still far from complete, and the method of indexing will no doubt need modification as the work is enlarged. Suggestions will be welcome both as to the list of magazines and the improvement of the indexing. Ice and Refrigeration, The Proceedings of the American Society of Civil Engineers', the Electrical Journal, and American Machinist do not appear on the list as the publishers have not yet sent us copies for indexing. The Textile World Record, General Electrical Review, Journal of American Institute of Architects, American Gas Light Journal have been chosen as the next additions, while the indexing of Horseless Age and Electrical Review and Western Electrician which was necessarily omitted from this volume, will be carried back to the beginning of 1913.

One of the difficulties of indexing engineering magazines is to indicate the fact that certain articles appear in more or less similar form in several different periodicals. As the titles of these articles usually vary, it takes a good deal of time to establish their identity or partial identity. This happens frequently in the case of reports or abstracts of papers presented before engineering or trade societies. The original paper may be published in one magazine, a portion of it in another, reasonably full abstracts in a third, and perhaps a brief summary in a fourth. An expression of opinion is very much desired as to the importance of indicating the relationship of these articles to one another. Should they be combined in one entry under one title, with some abbreviation or symbol to show the relationship e. g. "Same cond." or "excerpts," or might they be entered separately each under its own title and the time thus saved be spent more profitably in improvements in other directions?

Miss Louise Teich has edited copy and read the final proof of this index. Credit is due also to Mrs. Nellie Shimer for valuable assistance.

The American Institute of Mining Engineers publishes an index to volumes 36 to 40 of its Transactions, covering the years 1905 to 1909. This index supplements the "General Alphabetical and Analytical Index" of volumes I to 35. A new arrangement of material under group headings is introduced.

The American Society for Testing Materials has published an index to the first twelve volumes of the Proceedings of the society. Volume 1 contains the index to the twenty-eight bulletins that were issued at irregular intervals from 1898 to 1902. Volume 2 contains the index to the annual volumes which have been issued since that date, including the volume for 1913. A table of contents giving the contents for each individual volume follows the index proper.

The "Index to Transactions of the American Institute of Electrical Engineers" in two volumes has been issued by that society. "This index consists of two separate parts, each intended for a distinct purpose. First. There is an index of papers in which they are classified in natural groups and arranged chronologically in each group. Second. There is an index to specific data and information arranged alphabetically. The index of papers is intended for searchers desiring to locate papers on a given subject, and to aid in this search the papers have been characterized. These characterizations are not intended to be abstracts of the papers, but rather to give the scope and nature of their contents. . . The index to specific data and information is intended for searchers desiring to make a complete study of the subject as presented in the Transactions. There is a great mass of valuable information hidden in discussions which has no very direct connection with the subject of the paper. This data can be found only by reference to such a topical index." (Introduction) Volume I covers the period from 1884 to 1900 inclusive; volume 2, from 1901 to 1910 inclusive.

MONEY SAVED ON

MAGAZINE SUBSCRIPTIONS

For the convenience of those of our subscribers who wished to place all their magazine subscriptions in one order, we opened in 1911 a club list agency, and are now in a position to handle all orders promptly and satisfactorily. We can furnish any periodical, foreign or domestic, at as low rates as are given anywhere by reputable agents, and will quote on your list or handle your order for any number of magazines.

The new season dates from October 1, and there will be some changes in subscription prices. For the period, October 1 to November 10, many publishers offer subscriptions at special rates as an inducement to subscribers to place their orders before the December rush begins. We issue a "Last Chance" circular containing these rates and will send a copy to any library or individual interested. We suggest that you submit your next year's list as early as possible, and thereby not only gain the advantage of these special rates but also avoid the rush and danger of error attendant upon the rush of business in the publisher's office during the holiday season. Our Catalog containing the rates from November 10 to September 30, 1914 will be ready for delivery about November 10, and will be sent on request.

On November 1, we move to White Plains, N. Y. and this will bring us into closer communication with the principal magazine publishers and will enable us to transmit subscriptions and adjust complaints more quickly than ever before. That our service in the past has been satisfactory has been proved, we think, by the fact that the majority of those sending us their business in 1911-1912, gave us larger orders in 1912-1913 and are sending us their orders for 1913-1914, in many instances without even asking for a quotation. Our business for 1912-1913 was more than four times as large as in 1911-1912, and we are making preparations to handle a similar increase this season. Let us have your order, or if you prefer, your list for quotation.

THE H. W. WILSON COMPANY WHITE PLAINS, N. Y.

Printed Guide Cards for the Card Catalog

ONE of the many problems in connection with the card catalog is the guide card. It is difficult to letter guide cards in the typewriter and when made a few at a time, some of those in the catalog are badly worn while others are new and fresh, and those made at different times are not uniform. Manuscript cards are never satisfactory. As the card catalog grows it is necessary to add guides in order to preserve the balance and this is usually left for a dull time which never comes.

We can now supply printed guide cards for libraries and offer a selection of 1,000 which are printed on the best quality of guide cards, center cut. In making the selection of the headings, care has been taken to select subjects or names for which search is often made and which will be about equidistant in the average catalog.

The use of center-cut cards makes it possible for a librarian to select at random from the list without reference to the appearance of the cards in the file. Before choosing this card the matter was referred to librarians using our printed cards and the majority favored its use while the others offered no serious objections. Center-cut cards are growing in popularity and their use is in harmony with the trend of library progress.

These guide cards are sold on the basis of 1c each, minimum order, 100 cards. Libraries pay \$6.00 a thousand for the blank cards, so that the additional cost of printing is only at the rate of 40c a hundred, which is much less than the cost of making by hand. The expense of these is so moderate that libraries will not find it necessary to use old and worn out guide cards.

A list of subjects will be sent on request. In ordering simply check subjects wanted and return the list. Headings marked * are the ones recommended for first purchase.

We are making a very low rate on these cards, in the hope that their use will become general and that large sales will warrant our adding other cards to the list.

RECOMMENDATIONS

I consider the Guide Cards very useful and practical and they add greatly to the neatness of the card catalog. They save time and are no more expensive than manuscript cards. MATTIE FARGO, Cataloger, Iowa State Teachers College.

We are ordering one set as a trial for we feel that they will be a great addition to the usefulness and appearance of our catalog.

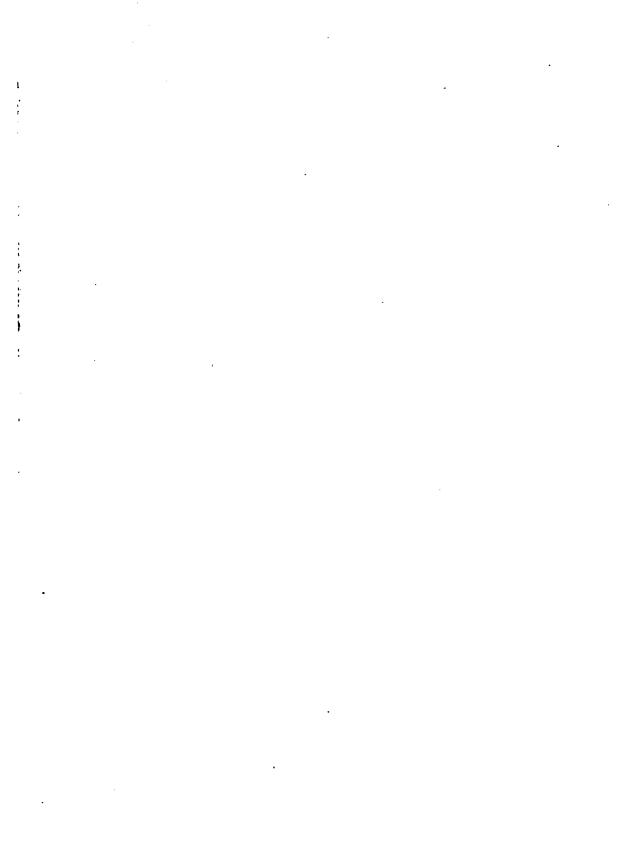

FANNY DUREN, Public Librarian, Waterloo, Iowa.

The plan of subject headings is excellent.

JOHNSON BRIGHAM. Lib'n State Library, Des Moines, Iowa.
